Your email ID is a visible representation of you in this age of electronic correspondence. Putting some thought into your email ID can help you make sure that the one you choose fits your needs and projects the image you desire.What Is an Email ID?Email accounts are available from a number of different service providers, and many of these accounts are free if you choose just the basic tier of services. Your email ID is the username for your account, and that’s typically the portion of your email address that comes before the “@” sign in the email address. When you log in to your email account with one of these free services, generally, you will use your email ID as your username before entering your password.Examples of Free Email ServicesYou have several options for free email services that you can use to set up an email account. Google, Yahoo and Outlook are some of the widely used and universal free services. Accounts with these servers are free as long as you don’t need extra features such as a bigger storage capacity. With these services, you choose your email ID when you set up your account. As long as the email ID isn’t already in use for someone else, you can have it assigned to your account.Paid Email AccountsPaid email accounts appear more professional, and they often have additional features that may be beneficial as you maintain your account. These email archiving and more email storage.Generally, a paid email account is a part of a domain package when you set up a website. You choose your domain name, and the package includes a custom email address that matches it. A more professional email ID in this case may be your first name only or your first and last names attached to your domain name.ISP Email AddressesYour internet service provider (ISP) may give you an optional email address. In this case, your email ID appears to the left of the “@” and the ISP name appears to the right. When you set up your account, part of the process involves choosing your email ID, which becomes part of your new email address. Your email address in this case is tied to your service with the ISP. If you change ISPs, you’ll lose the email address.Choose and Create a New Email IDWhatever email service you’re using, you’ll navigate through a process of choosing and designating your new email ID. Your email ID must be unique in the email service’s system. If you try to choose an email ID that’s not unique, you’ll get an error message and a prompt to choose a different one. Some service providers offer suggestions for email IDs based on your initial query, possibly adding numbers or punctuation to your last name and first initial. Choose the email ID you wish to use, set your password and proceed through the prompts to finalize setting up your email account. You’ll then see a screen with email ID login fields. MORE FROM QUESTIONSANSWERED.NET Photo Courtesy: elenaleonova/E+/Getty Images Paying taxes isn’t the highlight of anyone’s year, but it’s a mandatory task for most people in the U.S. Obviously, when it’s time to pay the Internal Revenue Service (IRS), you want to make sure every detail and all the calculations are correct. That starts with making sure you prepare all your tax information with the right tax ID. Whether you’re preparing tax and financial documents for the first time or you’ve simply misplaced your tax information, it’s possible to find your personal or business tax ID number.Types of Tax Identification NumbersBoth individuals and businesses in the U.S. have to file tax returns every year to report their annual income and pay any unpaid taxes on that income. Names can be duplicated, so the IRS established a system of using completely unique numbers to identify each taxpayer. Officially known as a Tax Identification Number (TIN), TINs come in several forms. The Social Security Administration assigns numbers to American citizens and permanent residents in the form of social security numbers (SSN). Most citizens receive their social security numbers as children for use throughout their lives, and it’s common for them to memorize their SSNs by the time they are young adults. Photo Courtesy: Ronnie Kaufman/The Image Bank/Getty Images In some cases, people are authorized to work in the U.S. but don’t qualify for an SSN. Examples include nonresident aliens and spouses and dependents of U.S. citizens or resident aliens who are not citizens themselves. The IRS issues Individual Tax Identification Numbers (ITIN) to these individuals to allow them to file income tax returns. If your income comes from a business, you may file tax returns under your personal name, depending on the type of business. However, you must have an Employer Identification Number (EIN) if you pay other employees to work for you. You would then use that number to file income tax returns for your business. An EIN is also required for businesses that file taxes as a corporation or partnership and those that must pay certain types of taxes, such as taxes on alcohol, tobacco and firearms. It’s also possible that banks and certain business licensing authorities may require an EIN.Track Down Your Social Security NumberIn the U.S., an individual’s social security number is highly classified information. The number connects people to their credit histories and bank accounts in addition to their employment and tax histories. If you can’t remember your social security number, you won’t be able to simply do some electronic digging to find it. You will have to get creative and think about the resources you have at your disposal. Photo Courtesy: Juan Camilo Bernal/Moment/Getty Images Your first course of action should be to check all your personal files and records, particularly financial documents, to look for your SSN. You can find this number on your tax returns, W-2 forms, 1099 forms, loan applications and documents, certain types of legal documents, and more. Social security numbers are extremely sensitive because they are used as legal identification for bank accounts, credit card applications, public assistance and more. That means these entities have your social security number in their records. However, due to concerns about identity theft, they will usually require you to appear in person with several other forms of identification to prove your identity before sharing your SSN with you.Replace Your Social Security CardIf you go to your local Social Security Administration office, you can leave with a new social security card in hand. Be sure to take the appropriate documents to prove your identity: driver’s license and birth certificate or passport (citizen); legal immigration documents and work eligibility documents (non-citizen). If you don’t need your SSN immediately, you can now request a replacement social security card online at the SSA.gov website by completing the security steps to set up a My Social Security account.Photo Courtesy: richcano/E+/Getty Images Contact the IRS for Your ITINIf you have an ITIN number and can’t remember it, try searching through your existing tax, financial and employment records (as recommended for a social security number). If you can’t find a document with the information, you will need to contact the IRS for assistance. Confidential ITIN information will never be (legally) available online.Photo Courtesy: Street view of IRS building in Washington D.C. Photo by Glowimages/Getty Images Search Business Records for Your EINLocating the EIN for your company should be much easier, as this number is often included on numerous types of company documents, including tax records, invoices, contracts, charitable donation letters, legal documents and more. Additionally, look for the official letter the IRS sent to your company when approving your EIN. You can also call the IRS to request the information, but you must be able to prove you are a person authorized to receive the information — partner, corporate officer, trustee, executor, etc. Photo Courtesy: Comstock/Stockbyte/Getty Images If your company is a publicly traded company, many online services maintain databases of EINs that are accessible to the public — and most don’t charge for the service. For example, the Electronic Data Gathering Analysis and Retrieval system (EDGAR) is maintained by the Securities and Exchange Commission (SEC) and contains publicly disclosed information about thousands of companies. Additionally, Melissa Data provides tax ID information for nonprofit organizations. MORE FROM ASKMONEY.COM Hola a todos, ojala puedan ayudarme con algunas dudas.. he pillado un ampli pequeño (dentro de lo que podía pagar) es un blackstar id core stereo 10, supongo que ya se ha hablado de el y muchos lo conocerán (claramente yo no), tengo algunas dudas respecto a el y comento la falta de manual, porque no llego a entender todos los botones que tiene y no le estoy sacando nada del potencial que ofrece, me explico, hay dos botones que no tengo la menor idea para que sirven (el manual y el tap)... cuando muevo la perilla "eq" siendo que el sonido no varia en absolutamente nada, cuando presiono el botón "manual", osea se enciende la luz, baja el volumen bastante respecto a cuando esta apagado... otra cosa que me quitar el sueño es que suena ese típico sonido de vacio, no se esta totalmente en silencio mientras no toco (lo cual no ocurre al desconectar el cable input del ampli) .... espero haberme explicado bien.. agradeceré cualquier ayuda por que sinceramente me la esta ganando y estoy a un paso de arrepentirme de la compra. El tap es simplemente para marcar a mano el tiempo de los efectos, es bastante sencillo, pon un delay, toca dos veces o tres el tap a un ritmo costante, toca un par de notas, vuelve a tocar el tap, esta vez un poco más lento, y vuelve a tocar un par de notas, es algo bastante bueno. El manual no se para que sirve, pero me parece que puedes como guardar presets y con el manual los guardas, pero ni idea Un saludo! #1 el manual esta en la página de Blackstar. Bájatelo y léelo. El botón de manual es para alternar entre Modo Preset y Modo Manual. El boron de Tap ya te lo han explicado, sirve para varios de los efectos. El botón de EQ controla el ISF. Lee el manual que explica lo que es. El ampli es cojonudo para practicar en casa pero requiere un poco por tu parte. Te aseguro que leyendo el manual e investigando por internet, YouTube... Le podrás sacar mucho partido. Si solo vas a ponerte a preguntar sin esforzarte y esperando que te lo den todo hecho... Entonces ese ampli no es para ti xjeanx escribió: El manual no se para que sirve, pero me parece que puedes como guardar presets y con el manual los guardas respecto al tap, toda la razón, lo estuve mirando y es tal como dices... muy útil.. gracias por tomarte el tiempo amigo, cuando averigue al 100x100 la funciona del manual lo comentare para dejar el aporte. #3 .. estimado... en primer lugar te agradezco la ayuda, se que el manual esta en la pagina, ya me lo descargue y no esta en español, no todos hablamos ingles fluido sabes, pero ten por seguro que me haré un tiempo para echarle un vistaso y traducir lo que no entienda. castleotto escribió: Si solo vas a ponerte a preguntar sin esforzarte y esperando que te lo den todo hecho... Entonces ese ampli no es para ti hombre aquí estamos en desacuerdo, en pedir (ayuda) no hay engaño, me compre el ampli hace un par de días y no hay manual en mi idioma, no tengo porque saber al dedillo como funciona, de ahí lo lógico es ir a alguna comunidad como esta a preguntar, según tu forma de verlo no soy digno del ampli ? porque eso me das a entender.. espero que no te tomes a mal este comentario, solo es mi opinión. 1 Pues sin animo de ofender a nadie, pienso que tampoco es preciso ningun manual, se ve todo bastante claro, en modo preset seleccionas el sonido que quieres, en modo manual lo ecualizas tu , asi de simple .. no tiene mas misterio , hay microondas mas dificiles de manejar . 1 #2 #3 #5 Agradezco a todos sus comentarios, para cerrar este hilo dejo mi grano de arena en caso que sea de ayuda para alguien mas que llegue aquí con mis mismas dudas... - la perilla "voice" selecciona los presets de fabrica (modificables) - las perillas ganancia, volumen e isf no tiene mucho que decir. - hay 3 efectos base; modulacion, delay y reberberacion, la perilla "type" genera diferentes combinaciones, dejando un total de 12 efectos a elegir. detallado en la pag. 6 del manual - el botón "tap" modifica tiempo/velocidad del efecto que este en uso - el botón "manual", como ya decía skamot, desactiva el uso de los presets almacenados o en software y da pase libre a la posicione de las perillas ganancia, volumen, isf. - vale mencionar que el ampli incluye el cable usb, llegar y conectar al pc, 100% recomendable el software insider (de la marca) para manipular parámetros, re configurar los presets de la perilla (voice), que mediante el software se pueden almacenar en el ampli para usarlos cuando no esta conectado al pc, tenerlo al lado de pc y jugar con los parámetros desde el pc no tiene desperdicio y es de lo mas cómodo. - comentar que el insider (al menos la primera vez) actualiza el firmware del ampli, ojo con eso, los que saben de informática sabrán que actualizar el firmware de un dispositivo es algo a tenerle respeto, como se vaya la luz o lo desconectes..... - otro cosa interesante, se puede volver a valores de fabrica, apagado se mantienen presionado los tres botones de efecto (mod,delay,reb) y se enciende, parpadean todos los led de "voice" ... espero sirva en caso que alguien tenga las mismas dudas, saludos a todos. 2 Yo lo compre. Pero no me viene el cable usb buen sonido y peta demasiado para sus 10w
